Before starting FCC statement: improper termination of the access points installed in the United States configured on controllers of US non-US models be in violation of ! the FCC grant of equipment authorization. Figure 5 Orienting the Ceiling Tile Rail Mounting Slots 3. 2. Please refer to the ArubaOS User Guide for details on restrictions. Figure 4 Installing the AP-105 Access Point on a Wall Using the Integrated Ceiling Tile Rail Slots The snap-in tile rail slots on the rear of the AP can be used to securely attach the device directly to a 15/16" wide, standard ceiling tile rail. Make sure the AP fits securely on the ceiling tile rail when hanging the ! device from the ceiling; poor installation could cause it to fall onto people or equipment. These RF absorbers/reflectors/interference sources will impact RF propagation and should have been accounted for during the planning phase and adjusted for in RF plan. RF absorbers include: Cement/concrete ˜AÂÂOld concrete has high levels of water dissipation, which dries out the concrete, allowing for potential RF propagation. Identify the specific installation location for each AP. This access point uses MIMO (Multiple-in, Multiple- out) technology and other high-throughput mode techniques to deliver high- performance, 802.11n 2.4 GHz and 5 GHz functionality while simultaneously supporting existing 802.11a/b/g wireless services. Install each AP. EU Statement: Lower power radio LAN product operating in 2.4 GHz and 5 GHz bands. N O T E Figure 1 AP-105 AP-105 Hardware Overview Figure 2 AP-105 Front 105 PWR 11B/G/N ENET 11A/N LEDs The AP-105 is equipped with four LEDs that indicate the status of the various components of the AP. 3. Pull the necessary cables through a prepared hole in the ceiling tile near where the AP will be placed. Use the AP placement map generated by Aruba's RF Plan software application to determine the proper installation location(s). When you choose the mounting location, allow additional space at the right of the unit for cables. Produit rÃ©Âseau local radio basse puissance operant dans la bande 2.4 GHz and 5 GHz. Please refer to the ArubaOS User Guide for details of restrictions. 5. Low power LAN radios, operating at 2.4 GHz and 5 GHz. Please refer to the ArubaOS User Guide for detailed information on restrictions. In particular, access points must use CAUTION channel assignments appropriate to the location where the access point will be used. Configure each AP. PWR: Indicates whether the AP-105 is powered or not ENET: Indicates the status of the AP-105 Ethernet port 11A/N: Indicates the status of the 802.11a/n 11B/G/N radio: Indicates the status of the 802.11b/g/n radio For information on the behavior of the AP-105 LEDs, see Table 1 on page Figure 3 AP-105 Connector Rear power CONSOLS Console port Use the console port to connect to a terminal for direct local management. AP Pre-Installation Checklist Before installing the AP-105 access point, make sure you have the following items: CAT5 UTP cable of the required length One of the following power sources: Power over Ethernet (PoE) source compliant with IEEE 802.3af Supports all features for AP-105 The POE source can be any power controller (PSE) or PSE midspan A device AC-DC AP adapter kit (sold separately) Aruba Controller network-ready: Layer 2/3 network connectivity at the access point 2. Any such intentional or intentional breach may result in a request the FCC for immediate cessation of operation WARNING and may be subject to forfeiture (47 CFR 1.80). ! FunkLAN Low Power product that works at 2.4 GHz and 5 GHz band. Check connectivity after installation. ATTENTION For more information on restrictions, please refer to the ArubaOS User Guide. Make sure these sources are taken into account when connecting an AP to its fixed location. Use these materials to repack and return the unit to the supplier if Verifying pre-installation connectivity Before installing APs in a network environment, make sure APs are able to locate and connect to the controller after power on. Identifying known RF absorbers/reflectors/sources of interference Identifying known RF absorbers, reflectors and sources of interference in the field during the installation phase is critical.
